

Keep Mobile Apps

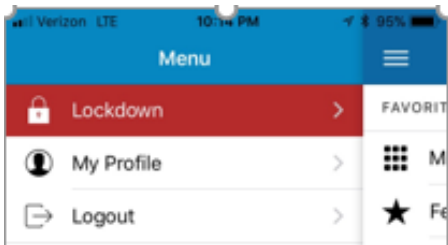

FUNCTIONALITY

- Available for iOS & Android
- Search for or view a specific cardholder in database
- Add new cardholders to the database along with photo (from stored image or via photo taken on device), badge type, access card and personal information. Or, edit existing personnel.
- In urgent situations, instantly revoke access of an individual
- View events to see important transactions in real time
- Check on status of all access control field hardware
- Create or review a favorites list that will mirror those set up in desktop app/HTML5 client
- Use pre-determined lockdown functionality created in desktop applet for emergency situations while away from desk
- Receive events on mobile app and review any special instructions attached to event, then, add your own acknowledgements, including photos taken using device camera
- Remotely control individual doors by momentarily unlocking (pulse), unlock or lockdown

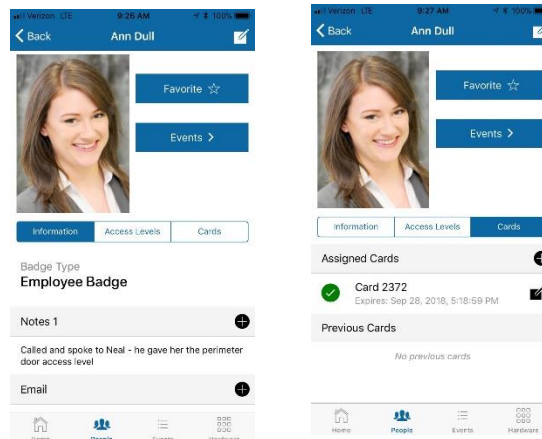

KEEP MOBILE APP OVERVIEW

Have the power of Keep in the palm of your hand with the mobile app. Available in both an iOS and Android version, the mobile app is an administrative tool designed to allow key functionality when away from the desk or laptop. All operations are performed in real time due to Keep's RESTful API.

Remotely unlock individual doors or times of crisis situations, place entire facility in lockdown mode with one click of a button.

Need to enroll a new cardholder to the database without arranging a visit to the main office? Keep's mobile app allows you to add key information on the individual, use the device to add a photo and administer an access credential from anywhere.

All events acknowledged using the mobile app are immediately marked as viewed in Keep's database.
