Feenics Inc. Announces Keep by Feenics™ August 2020 Update

Latest version of their flagship Access Control as a Service Platform features single sign on and scheduled reporting capabilities.

Ottawa, Can. – August 18, 2020 — Feenics, an Ottawa based provider of forward-thinking Access Control as a Service (ACaaS) solutions, today announced the availability of the August 2020 update of its Keep by Feenics™ cloud-hosted access control platform.

The August 2020 update of Keep by Feenics features exciting new functionality, including support for single sign-on authentication and scheduled reports.

"We are thrilled that our latest update includes features highly desired by our customers," explained Hanna Farah, Chief Technology Officer at Feenics, "The new single sign on capability allows our customers to streamline the user authentication process into Keep, reduces password fatigue, and provides a tighter integration with their backend IT systems. Combined with multi-factor authentication capability enabled through the customer's backend IT security stack, a single sign-on approach offers a solid one-two punch in combating malicious cyber activity."

"We've also added the ability to automate report generation and distribution," Farah continued "scheduling reports streamlines administrative processes and as a bonus, managers will conveniently have reports automatically routed to their inboxes."

Additional features available with the August 2020 update of Keep include the ability to share access levels from the customer enterprise root instance down through shared instances (tenant) and support for ASSA Abloy's Aperio line of wireless locks. Lastly, the Keep infrastructure has been updated to run on top of Microsoft's .Net Core to facilitate better overall system performance and cross platform support.

Feenics continues to fortify its position as an ACaaS market leader. They are a Mercury Platinum level partner and are certified as an International Organization for Standardization ISO 9001:2015 company. Keep has been newly certified as a FICAM & FIPS-201-2 compliant solution. In addition, the company recently received a 2020 Platinum Govies Award from *Security Today* in the Access Control Software/Controllers category.

About Feenics

Feenics is paving the way for the future of physical security with innovative cloud-based access control solutions. Feenics is the maker of Keep, a cloud-hosted platform that provides extreme scalability, unprecedented flexibility and advanced security in ACaaS applications. It integrates native visitor management and a RESTful API that allows simple integration of complementary systems and open hardware devices, resulting in a lower total cost of ownership. Keep by Feenics offers on-site servers or offsite cloud deployment, hosted by Amazon Web Services. Leveraging Authentic Mercury Security open field hardware, Feenics works with industry leading video, intrusion and wireless lock manufacturers, delivering robust solutions through its value-added reseller partners around the world.
