

## Feenics Inc. Announces Their Keep by Feenics™ Integration to Hanwha Techwin's Wisenet Wave IP Video Management System

*Newest integration to their flagship, enterprise-class Access Control as a Service Platform provides enhanced video verification capabilities for alarm activity and people verification for joint end users.*

**Ottawa, Can. – March 11, 2021** — Feenics, an Ottawa based provider of forward-thinking Access Control as a Service (ACaaS) solutions, today announced a new integration with Hanwha Techwin's Wisenet Wave IP Video Management System as part of its Keep by Feenics™ cloud-hosted access control platform.

The Wave Wisenet and Keep by Feenics integration provides a unified monitoring experience for system operators and includes the ability to view live video, review archived video related to alarm activity, and export recorded video clips, all from within the Keep Windows App.

"The Wisenet Wave video platform from Hanwha is a great addition to the Keep ecosystem," explained Paul DiPeso, Executive Vice President at Feenics, "their forward leaning approach to IP Video gives our customers exciting new options for integrated cloud-based video solutions."

Additional capabilities available with the integration include the ability to utilize camera PTZ controls from within Keep as well as the ability to capture individual image snapshots of a current frame from both the live video feed and from the recorded video feed.

"The user experience is quite seamless," DiPeso continued "as an example, Wave cameras can be automatically loaded into Keep and then be assigned to specific hardware devices for fast video recall when alarm activity occurs. Camera icons can even be placed on our graphical maps so that video can be accessed from there as well."

"Hanwha Techwin's Wisenet WAVE VMS Integration with Keep by Feenics meets the everyday needs of end users, system integrators and technology partners," says Tom Cook, Executive Vice President of Sales, North America, Hanwha Techwin America. "Our partnership with Feenics allows us to meet the market demand of integrated systems of two great companies working together."

Feenics continues to fortify its position as an ACaaS market leader. They are a Mercury Platinum level partner, International Organization for Standardization [ISO 9001:2015](#) company, and certified as a FICAM & FIPS-201-2 compliant solution. Feenics was recently awarded a 2020 [CyberSecured Award](#) from *Security Today* in the Access Control category. In addition, the company ranked No. 231 on the Globe & Mail Report on Business 2020 Top 400 List of fastest growing Canadian companies.

### About Feenics

Feenics is paving the way for the future of physical security with innovative cloud-based access control solutions. Feenics is the maker of Keep, a cloud-hosted platform that provides extreme scalability,

unprecedented flexibility and advanced security in ACaaS applications. It integrates native visitor management and a RESTful API that allows simple integration of complementary systems and open hardware devices, resulting in a lower total cost of ownership. Keep by Feenics is hosted by Amazon Web Services. Leveraging Authentic Mercury Security open field hardware, Feenics works with industry leading video, intrusion and wireless lock manufacturers, delivering robust solutions through its value-added reseller partners around the world.
